EDUCATION

The University of Texas at Austin

Bachelor of Science in Mechanical Engineering

- GPA: 3.86

Austin, TX

May 2027

EXPERIENCE

Dell Technologies

May 2026 – August 2026

Hardware Engineer Intern

Austin, TX

- Designed an IP66-rated SSD enclosure for next-gen laptops using Creo, integrating sealing features and driving the design from concept through functional prototype to meet environmental and product requirements
- Reduced projected manufacturing costs by 28% through enclosure geometry optimization, component consolidation, and DFM/DFA improvements
- Collaborated with mechanical, electrical, and thermal engineering teams to evaluate system-level tradeoffs, integrate subsystem requirements, and refine the enclosure architecture throughout product development

Tesla

January 2026 – May 2026

Mechanical Design Engineer Intern

Fremont, CA

- Optimized service tooling for a humanoid robotics program using CATIA and rapid prototyping, reducing joint removal time during service by 50%
- Developed service tooling solutions, enhancing repair efficiency and accuracy for high volume service centers
- Partnered cross-functionally with engineering, service, and supplier teams to integrate new tooling solutions into existing workflows to improve service efficiency and deployment readiness

Apple

January 2025 – August 2025

Mechatronics Intern

Austin, TX

- Redesigned fixture for an iPhone disassembly robot using Fusion 360, GD&T, and tolerance analysis; improved system robustness and expanded compatibility by 30%, increasing yield by 10% in high-volume operations
- Developed a keyboard removal fixture for consumer electronics enclosures using NX and CNC machining; partnered with vendors to refine manufacturability and deployment, reducing cycle time by 83% and increasing throughput by 79%
- Led cross-functional design reviews and validation testing at vendor sites; developed functional prototypes and disassembly tooling aligned with ergonomics and high volume manufacturing

Evolution Spine

May 2024 – August 2024

Product Design Intern

Dallas, TX

- Designed surgical instruments in SolidWorks with GD&T and tolerance analysis, drafting detailed prints for secure vendor release and achieving a 10% reduction in manufacturing costs
- Conducted risk analysis and GD&T optimization for DFM/DFA and quality improvement, leading to a 5% decrease in product defects and continuous improvement in production reliability
- Executed design verification, validation testing, and inspection protocols, documenting results to support regulatory and production release decisions

PROJECTS

Pick and Place Robot Arm

- Engineered a servo-driven pick-and-place robotic arm using four-bar linkage kinematics, optimizing link geometry for repeatable motion while avoiding collisions
- Performed kinematic, force, and acceleration analysis to define end-effector trajectories, size actuators for peak loads, and improve structural stiffness during dynamic operation
- Designed and prototyped a geared compliant gripper using 3D printing and iterative testing to securely handle objects of varying geometries

Quadcopter Drone Frame

- Led a 5-member team in developing an autonomous drone, integrating mechanical structures, embedded electronics, and navigation hardware into a functional system
- Designed and validated a lightweight drone frame in SolidWorks using physical testing, optimizing geometry to minimize deflection while maintaining structural integrity

TECHNICAL SKILLS

CAD & Software: SolidWorks, Fusion 360, NX, CATIA, Creo, MATLAB, Python, Java, Arduino

Design & Manufacturing: GD&T, Rapid Prototyping, DFM/DFA, Machining, Injection Molding, Sheet Metal, 3D Printing
